ARE UNEXPECTED MACHINE FAILURES WITHIN YOUR MAINTENANCE BUDGET?

Think about the last three equipment failures in your plant

If you had known they were going to happen in advance, how much could you have saved?

What if you could see inside of your equipment without taking it apart?

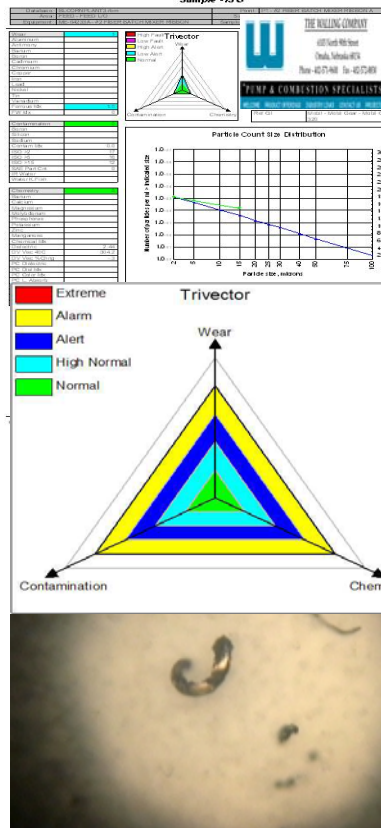

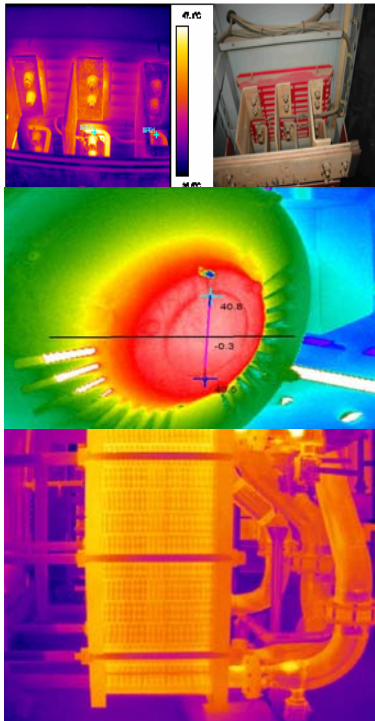

What if you knew which parts were bad and could order the correct ones in advance?

Features

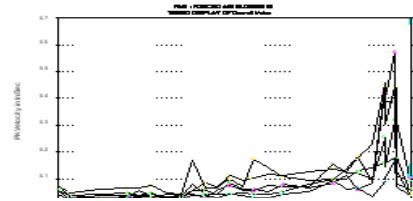

Benefits

- Predict the time of failure
- Predict which component will fail
- Reduces catastrophic failure/secondary damage
- Enhances product quality
- Reduces repair expenses
- Equipment reliability and availability
- Portable Dynamic Balancing
- Improves safety
- Extends the life of the equipment
- New/Rebuild machinery acceptance testing
- OEM/Warranty/Installation certification
- Flaws in new and in-service equipment
- Reduced PM tasks and inventory
- Decreases and can eliminate downtime
- Decreased shipping and maintenance costs
- Eliminates total system rebuild
- Reduces rejected/out of spec/lost product
- Eliminates budget shortfalls and surprises
- More units/product out the door
- Smooth operation reduces friction and heat
- Failure could be deadly!
- Defers replacement expenses
- Craft/Contractor skills improvement
- Equipment repaired while in warranty
- Reduce Insurance costs
- More time for planning and scheduling
